About The Book

Cloned Ejuice is a D.I.Y. ejuice bible with information on all aspects of D.I.Y. From supplies to cloned flavors and links for further reading.

Cloned Ejuice is a relatively new phenomenon in the world of flavorings, a field dominated mainly by cooking products and beverages.

Cloned Ejuice was created as a means to not only supplement the cost of using ejuice, but also to assist with creating a marketable and profitable business for many amateur and professional flavorists.

Cloned Ejuice is a complete guide that gives you a better understanding of how to accurately create or emulate any flavor you can imagine.

WHY D.I.Y.?

PROS

Save Money!

Know What's In Your EJuice

Make The Flavor You Want

Sell Your EJuice Commercially

Fun Hobby/ Pass Time

CONS

Handle Hazardous Materials

Upfront Cost To Start

Learning Curve

Time Requires Patience

D.I.Y. Supplies

Consumables

- **Nicotine Base (Base)** - This can be ordered in a PG base, VG base or a combination thereof. While a PG base is easier to work with, I recommend a VG base. Always order your nicotine solution in a higher concentration (mg / ml) than your end goal juice as this saves the most money.
- **Propylene Glycol (PG)** - Propylene glycol, also called 1,2-propanediol or propane-1,2-diol, is an organic compound (a diol or double alcohol) with formula C₃H₈O₂. It acts as a flavor carrier and is a colorless, clear, viscous liquid with a faintly sweet taste.
- **Vegetable Glycerin (VG)** - Glycerol (or glycerine, glycerin) is a simple polyol (sugar alcohol) compound used to make ejuice thicker and increase clouds. Glycerol is sweet tasting and non-toxic, it is widely used in pharmaceutical formulations.
- **Flavors** - Lot of choices (skip to “The Abbreviations”)

Mixing by Volume

- **Syringes** – I recommend a set of glass syringes as they can be cleaned, reused and do not crack from acidic flavorings. Plastic syringes will work if glass is not an option. Get one of each - 1mL, 5mL, 10mL/20mL. The smaller two should be luer-lock.
- **Blunt Tip Needles** – 14 gauge or 16 gauge is best.

Mixing by Weight

- **Scale** – There are many scales to choose from. You will need a scale that weighs down to 0.01 grams, with at least a 500 gram limit or more. The scale should not have an auto-shut off feature, this is important.
- **Pipettes** – These are mainly needed for bottles with no dropper tops.

Other Necessities

- **Bottles** - You will use a lot of bottles, buy them in bulk. I'd recommend starting with 30mL bottles as these are the most commonly requested.
- **Nitrile Gloves** - Basic safety essential for handling hazardous material; protects from spills.
- **Labeling System** - As simple as a piece of paper you write on and then tape over, alternatively you can get professional labels/ stickers printed for your bottles
- **Record Keeping** – Always store your recipes.
- **Paper Towels** – You will need lots of these.

Secret Ingredients

(A-Z by Name)

AAA Magic Mask (MM) - adds mouthfeel, while reducing acid perception without modifying pH.

Acetyl Pyrazine (AP) - Diluted to 5-10% in PG - imparts a nutty/baked/bready flavor. Typically used to enhance tobacco flavors or bakery mixes.

Aldehyde – L-14 Peach - Diluted to 1% in PG - Use at 0.5-1%. Be extremely careful with undiluted solution. Adds a very dry peachy note.

Apple Cider Vinegar/ White Vinegar (ACV) - Increases acidity, which helps some flavors to pop. Usually used in tobacco mixes, whereas lemon juice is used in fruity mixes.

Bitter Wizard (BW) - Imparts bitterness, removes sweetness, adds dryness. Usually used in tobacco mixes, but can be useful for more.

Caryophyllene Oxide - Diluted to 1% in PG – Use at 0.5-1% - Adds a woody notes to tobaccos and mixes well with some fruits.

Ethyl Maltol (EM) - Diluted to 10% in PG - EM is also known as Cotton Candy. Often referred to as a sweetener. At low percentages it adds body, moisture, and reduces the intensity of sharp notes.

Ethyl Vanillin (Vanillin) - Diluted to 10% in PG - Ethyl Vanillin is a sweetener too, it also adds a vanilla-note in your mixes.

Koolada - Diluted to 10% in PG - Koolada adds that cooling effect of menthol but without the flavor.

Vape Wizard (MTS) - Mellow, Thick, Smooth assists in making vapor thicker and adding body and depth.

Lemon Juice - Increases acidity. Used to enhance fruity flavors and give it "that something extra".

Malic Acid - Diluted to 20% in PG – Typically mixed in a solution between 10-20%. Adds a sour effect to ejuice.

Citric Acid - Diluted to 10% in PG – Typically mixed in a solution between 10-20%. Adds a sour effect to ejuice.

Malic + Citric Acid - Usually called "Tart & Sour", is used to make fruit flavors "pop"

Menthol - Diluted to 10% in PG - Comes in crystal form, adds a cool mint to the ejuice.

Pure Grain Alcohol (PGA) - (Everclear/151 Rum/Vodka - high proof) 1-2 drops per 5 ml adds throat hit.

Saline - Saline, or saline solution, is medical grade distilled water with salt (NaCl). It's typically used in tobacco or bakery flavors, and adds body and enhances flavors.

Smooth - Smooth mellows out harsh edges of flavors, softens the high notes and provides mouthfeel, while boosting the background notes.

Sweetener - Diluted to 10% in PG – Sucralose is mostly used in fruits, candy, and bakery flavors, and like EM it enhances flavors, while a bit more, like 1% and above, will add sweetness.

Other Sweeteners :

- Marshmallow (TPA) - Used like EM, for adding moistness and sweetness.
- Molassas (TPA) – Imparts sweetness.
- Brown Sugar Extra (TPA) – Imparts sweetness.
- Honey (TPA) – Imparts sweetness.

Trimethyl Pyrazine - Usually in a 10% solution, trimethyl pyrazine is good for tobacco mixes. Taste notes attributed: Nutty, musty, cocoa, drying, peanut-like a raw coffee.

Order Right

Be familiar with the ejuice you are trying to clone, or flavor you wish to emulate.

Be familiar with the taste/ smell of the flavorings you are ordering. Each companies flavorings are different, I can't stress this enough.

Be familiar with complimentary additives (skip to "Secret Ingredients") that can assist in adapting the flavor to your liking.

Get more than you will need - This is very important if you are currently selling your ejuice.

Plan out your order like you would plan out a "meal" - Think of the flavorings as ingredients, now think of the amount of each ingredient you would use to physically make, or clone the "meal" that you're tasting. Use that concept and apply it to your flavoring orders for better success rate during flavor selection for mixes.

i.e. If the "meal" is an apple with sprinkled brown sugar, you would order and use a **larger amount** of apple flavoring, and a **lesser amount** of brown sugar flavoring for your mix.

Proper Mixing

Safety First, always wear protective gear such as gloves and eye protection.

Sample all flavors individually before you start mixing if you are unfamiliar with them.

Do not use one syringe for all flavors, there is a chance of cross-contamination and unwanted flavors arising.

Properly disinfect your glass utensils by cleaning them thoroughly.

Make multiple versions of your clone ejuice, remember to keep the best recipe.

Mix more than you think you will need, this way you will never run out of stock.

If you need help with the math behind mixing, such as converting percentage to mL, try using a simple ejuice calculator. There are many online and available as apps for iPhone & Android.

Steep Better

Time Method – This is the simplest and many argue the best method. The flavor combinations of all ejuice changes over time even if it is not very noticeable.

- Leave the cap completely off, or unscrewed fully but covering the bottles opening for 24-72hours if the flavorings used contain any kind of alcohol.
- Shake your mix daily after the first day and leave it in a cool dark place. Get familiar with the smell and taste of your ejuice as it steeps. Over the course of a day to a week you will notice how the flavors dynamic range changes in complexity.

Crockpot Method – A popular method to speed steep that is readily available to most.

- Place capped bottles filled with ejuice into the crockpot, then fill the crockpot carefully with water until it reaches halfway up the bottles. Turn the crockpot on for 2-24 hours (remember to refill with water). Hot water will work in place of a crock pot but requires frequent replacement to maintain an even temperature.

Hot Rice Method – Another well known speed steeping method, this requires a bowl of dry rice.

- Prep the microwave for 3-5 seconds, place the capped ejuice bottles into the middle of the bowl of dry rice and place the bowl into the microwave and start it. Shake once the bottle is cool and repeat as necessary.

Microwave Method – Also known as nuking, this method gently heats your ejuice.

- Prep the microwave for 3-5 seconds, place in an uncapped bottle filled with ejuice and start the microwave. Upon completion, shake and repeat twice or until the bottle is warm..

Never heat bottles in the microwave for more than 5 seconds at a time.

Ultrasonic Method – A popular method is to put bottles of ejuice in an ultrasonic cleaner (commonly used to clean jewelry). Heated ultrasonic cleaners are available and significantly speed up the steeping process.

- Place the capped ejuice bottles into the ultrasonic cleaner and turn it on.

Pro Tips

How do I create brand awareness for my ejuice?

Brand awareness is especially important in the ejuice business. Some companies have based their entire livelihoods on a clone and brand awareness. Though brand awareness is important it is no replacement for talent and a truly great ejuice mix.

- Make a catchy name for your company.
- Make a catchy name for your ejuice(s).
- Make a catchy website with an e-commerce plugin and SEO plugin
- Join popular social platforms such as Pinterest, Instagram & Twitter and promote your products.
- High quality photos of attractive women using your ejuice converts the most unique visitors, likes and views – This may cost some money if you plan to use models..
- High quality photos of bearded men using your ejuice converts the most unique visitors, likes and views – This may cost some money if you plan to use models.

How do I market my ejuice?

There are many ways to market your ejuice. Many companies market their ejuice towards a specific niche involving their mix, others go as far as to only do one specific flavor.

Niche Examples

20/80 PG/VG (Max Cloud)

80/20 PG/VG (Max Flavor)

Monthly Box (Service)

Specific Flavor Examples

Swedish Fish (i.e. Sweetish Fish)

Chips Ahoy! (i.e. Drops Ahoy!)

Tobacco Flavors Only (i.e. Trubeco)

Bakery Style Flavors (i.e. The Muffin Man)

How do I build hype around my ejuice?

- One of the best ways to build hype around your ejuice is to get up and get it out there.
- There can be no hype if you're the only one who has tried your ejuice.
- Offer giveaways but be responsible and always require an ID verification if you ever do a giveaway for ejuice online. I recommend only doing selective giveaways for 0mg (no nicotine) ejuice.
- Give friends or customers free samples (10mL bottles work best), ask them to recommend your ejuice to others using the free sample as incentive to buy more.
- Consistently create awesome, unique, hard to replicate flavors that have a mass appeal.

How do I get distribution for my ejuice?

- Presentation is very important in getting a large distribution deal, some distributors say it may be more important than your ejuice. You will not only need labels for your bottles, but also an impressive way of packaging your bottles for when it is shipped to the distributors office. First impressions last a lifetime.
- Once you have your ejuice mixed, bottled, steeped, labeled, and packaged professionally it may be accepted by a large distributor.
- You can try sending your ejuice un-solicited to Zamplebox (Zamplebox.com), and many other monthly ejuice services. If the presentation and marketing is there you may receive a call back.
- Taking on a large distribution deal can be a mind boggling concept, but there are services that can help in the case that it does happen; and it does happen.
- There are bottling services that will mix, bottle, label, and lab test your ejuice. It is a great option if your ejuice is accepted by a large distributor.
